

Release Notes — Acme Cloud Platform

Release v3.7 series

v3.7.0 — Major release (released 2024-09-15)

New: Hybrid search support across the entire data catalog. Combines vector similarity with keyword (BM25) ranking via Reciprocal Rank Fusion.

New: AC-ANALYTICS-PRO-MONTHLY and AC-ANALYTICS-ENT-ANNUAL SKUs are now available in all regions.

Changed: The default page size on list endpoints increased from 50 to 100. Customers relying on the old default should pass an explicit pageSize parameter.

v3.7.1 — Patch release (released 2024-10-02)

Fixed: ERR-4012 was incorrectly returned for subscriptions inside the 30-day grace period. The grace period now behaves as documented.

Fixed: The acme-cli subscription list command would silently drop the --filter flag when combined with --output json.

v3.7.2 — Critical patch (released 2024-10-18)

Security: Patched a vulnerability in token validation that could allow an expired token to pass signature verification under rare conditions. All customers are required to upgrade.

Fixed: Rate limiter occasionally returned ERR-5001 instead of ERR-4029 when the limit was hit at exactly the minute boundary.
