

acme-cli — Command Line Reference

Companion CLI for Acme Cloud Platform

Authentication

acme-cli login — opens a browser to authenticate the local CLI session. Tokens are cached in `~/.acme/credentials` and refreshed automatically.

acme-cli logout — clears all cached credentials.

Subscriptions

acme-cli subscription list — lists all subscriptions on the active account.

Supports `--filter status=active|expired|cancelled`, `--output json|table|yaml`, and `--since <duration>` (e.g. `--since 7d`).

acme-cli subscription cancel <subscriptionId> — cancels a subscription. Equivalent to calling `DELETE /v2/subscriptions/{subscriptionId}`.

Accounts

acme-cli account create --name <name> --billing-email <email> — creates a new account.

acme-cli account describe <accountId> --output json — prints full account detail.

Diagnostics

acme-cli logs tail --since 1h — streams the latest hour of platform logs.

acme-cli logs tail --filter error-code=ERR-4012 — filters logs to a specific error code.
